

MD 441

Directional Studio Microphone for Multi-Professional Applications. The Dynamic Top Model.

The MD 441 is an exceptionally fine microphone. Its quality and its many selectable settings make it the ideal microphone for experts and the most fastidious audiophile. It is suitable for all possible transmission techniques. The frequency response can be set in ten different ways. The "brilliance" switch increases high frequencies. The bass control has five different positions for varying the low frequencies. Because of its super cardioid directional characteristic, the MD 441 can be used under difficult conditions. A double case, where the inner shell is spring-mounted to the outer case, protects the microphone against handling noise.

Frequency response: . . . 30 . . . 20000 Hz
Directional characteristic: . . . supercardioid
Impedance: . . . approx. 200 Ω
Sensitivity: . . . 2 mV at 94 dB SPL
