## 54LS/74LS670 <br> 4 X 4 REGISTER FILE <br> (With 3-State Outputs)

DESCRIPTION - The '670 contains 16 high speed, low power, transparent D-type latches arranged as four words of four bits each, to function as a $4 \times 4$ register file. Separate read and write inputs, both address and enable, allow simultaneous read and write operation. The 3-state outputs make it possible to connect up to 128 outputs to increase the word capacity up to 512 words. Any number of these devices can be operated in parallel to generate an $n$-bit length. The '170 provides a similar function to this device but it features opencollector outputs.

- SIMULTANEOUS READ/WRITE OPERATION
- EXPANDABLE TO 512 WORDS BY n-BITS
- TYPICAL ACCESS TIME OF 20 ns
- 3-STATE OUTPUTS FOR EXPANSION

ORDERING CODE: See Section 9
