Absolute Maximum Ratings (Note)
If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.
Supply Voltage
7 V
Input Voltage
Operating Free Air Temperature Range
DM74LS
$0^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$
Storage Temperature Range $\quad-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

## Recommended Operating Conditions

## Functional Description

The LS574 consists of eight edge-triggered flip-flops with individual D-type inputs and TRI-STATE true outputs. The buffered clock and buffered Outputs Enable are common to all flip-flops. The eight flip-flops will store the state of their individual D inputs that meet the setup and hold times requirements on the LOW-to-HIGH Clock (CP) transition. With the Output Enable ( $\overline{\mathrm{OE}})$ LOW, the contents of the eight flipflops are available at the outputs. When the $\overline{\mathrm{OE}}$ is HIGH, the outputs go to the high impedence state. Operation of the $\overline{\mathrm{OE}}$ input does not affect the state of the flip-flops.

Truth Table

| Inputs |  | Outputs |  |
| :---: | :---: | :---: | :---: |
| Dn |  | CP | OE |
| H | - | On |  |
| L | L | L | L |
| X | X | H | Z |

$H=$ HIGH Voltage Level
$\mathrm{L}=$ LOW Voltage Level
$\mathrm{X}=$ Immaterial
$Z=$ High Impedance

## LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
