## 74LCX574

## Octal D-Type Flip-Flop with 5V Tolerant Inputs and Outputs

## General Description

The 'LCX574 is a high-speed, low power octal flip-flop with a buffered common Clock (CP) and a buffered common Output Enable ( $\overline{\mathrm{OE}})$. The information presented to the D inputs is stored in the flip-flops on the LOW-to-HIGH Clock (CP) transition.

The 'LCX574 is functionally identical to the LCX374 except for the pinouts.
The 'LCX574 is designed for low voltage (3.3V) V $\mathrm{V}_{\mathrm{C}}$ applications with capability of interfacing to a 5 V signal environment. The 'LCX574 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining CMOS low power dissipation.

## Features

- 5V tolerant inputs and outputs
- 7.5 ns tpD max, $10 \mu \mathrm{~A}$ ICCQ max
- Power down high impedance inputs and outputs
- 2.0V-3.6V $\mathrm{V}_{\mathrm{CC}}$ supply operation
- $\pm 24 \mathrm{~mA}$ output drive
- Implements patented Quiet SeriesTM noise/EMI reduction circuitry
- Functionally compatible with 74 series 574
- Latch-up performance exceeds 500 mA
- ESD performance:

Human body model > 2000V
Machine model > 200V

## Functional Description

The 'LCX574 consists of eight edge-triggered flip-flops with individual D-type inputs and TRI-STATE true outputs. The buffered clock and buffered Output Enable are common to all flip-flops. The eight flip-flops will store the state of their individual $D$ inputs that meet the setup and hold time requirements on the LOW-to-HIGH Clock (CP) transition. With the Output Enable ( $\overline{\mathrm{OE}}$ ) LOW, the contents of the eight flipflops are available at the outputs. When $\overline{O E}$ is HIGH, the outputs go to the high impedance state. Operation of the $\overline{\mathrm{OE}}$ input does not affect the state of the flip-flops.

Note 1: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating
Conditions" table will define the conditions for actual device operation.
Note 2: Io Absolute Maximum Rating must be observed.
