4-channel BTL driver for CD players
BA6897S / BA6897FP

The BA6897S and BA6897FP are a 4-channel BTL driver for CD player motors and actuators. It has an internal 5V regulator and standard operational amplifier, and is suited to a wide range of applications.

●Applications
CD players, CD-ROM drives

●Features
1) Minimal number of external components.
2) Driver gain is adjustable with just one attached resistor.
3) Internal 5V regulator (attached PNP transistor necessary).
4) Internal standard operational amplifier.
5) Internal thermal shutdown circuit.

●Absolute maximum ratings (Ta = 25°C)

Parameter		Symbol	Limits	Unit
Power supply voltage		V_{CC}	18	V
Power dissipation	BA6897S	Pd	1.7*1	W
	BA6897FP		1.7*2	
Operating temperature		Topr	−35～+85	℃
Storage temperature		Tstg	−55～+150	℃

*1 Unmounted
*2 When mounted on a 50 × 50 × 1 mm paper phenol board
Reduced by 13.6 mW for each increase in Ta of 1℃ over 25℃.

●Recommended operating conditions (Ta = 25°C)

Parameter	Symbol	Limits	Unit
Power supply voltage	V_{CC}	6～9*2	V

*2 However, the driver can operate at up to 4.5V.

●Pin descriptions

BA6897S

Pin No.	Pin name	Function
1	N.C.	N.C.
2	Vcc	Power supply
3	BIAS IN	Bias amplifier input
4	VIN1′	Input for adjusting the driver channel 1 gain
5	VIN1	Driver channel 1 input
6	VO1 (+)	Driver channel 1 positive output
7	VO1 (−)	Driver channel 1 negative output
8	GND	Substrate ground
9	VO2 (−)	Driver channel 2 negative output
10	VO2 (+)	Driver channel 2 positive output
11	VIN2	Driver channel 2 input
12	VIN2′	Input for adjusting the driver channel 2 gain
13	REG−B	Connect to base of attached transistor
14	REG OUT	Constant voltage output (connectto collector of attached transistor)
15	MUTE	Mute control
16	FIN	FIN
17	N.C.	N.C.
18	GND	GND
19	VIN3′	Input for adjusting the driver channel 3 gain
20	VIN3	Driver channel 3 input
21	VO3 (+)	Driver channel 3 positive output
22	VO3 (−)	Driver channel 3 negative output
23	GND	Substrate ground
24	OP OUT	Operational amplifier output
25	OP IN (−)	Operational amplifier negative input
26	OP IN (+)	Operational amplifier positive input
27	VO4 (−)	Driver channel 4 positive output
28	VO4 (+)	Driver channel 4 negative output
29	VIN4	Driver channel 4 input
30	VIN4′	Input for adjusting the driver channel 4 gain
31	Vcc	Power supply
32	FIN	FIN

∗Positive and negative output is relative to the polarity of the input pins.

BA6897FP

Pin No.	Pin name	Description
1	VO1 (−)	Driver channel 1 negative output
2	VO1 (+)	Driver channel 1 Positive output
3	VIN1	Driver channel 1 input
4	VIN1′	Driver channel 1 input, gain adjustment pin
5	REG−B	Connect to external transistor base
6	REG OUT	Constant voltage output, connects to external transistor collector
7	MUTE	Driver mute control input
8	GND	Ground
9	VIN2′	Driver channel 2 input, gain adjustment pin
10	VIN2	Driver channel 2 input
11	VO2 (+)	Driver channel 2 positive output
12	VO2 (−)	Driver channel 2 negative output
13	GND	Substrate ground
14	OP OUT	Operational amplifier output
15	OP IN(−)	Operational amplifier input, negative
16	OP IN(+)	Operational amplifier input, positive
17	VO3 (−)	Driver channel 3 negative output
18	VO3 (+)	Driver channel 3 Positive output
19	VIN3	Driver channel 3 input
20	VIN3′	Driver channel 3 input, gain adjustment pin
21	V_{CC}	Power supply
22	V_{CC}	Power supply
23	BIAS IN	Bias amplifier input
24	VIN4′	Driver channel 4 input, gain adjustment pin
25	VIN4	Driver channel 4 input
26	VO4 (+)	Driver channel 4 positive output
27	VO4 (−)	Driver channel 4 negative output
28	GND	Substrate ground

Note: Positive and negative output is relative to the polarity of the input pins.

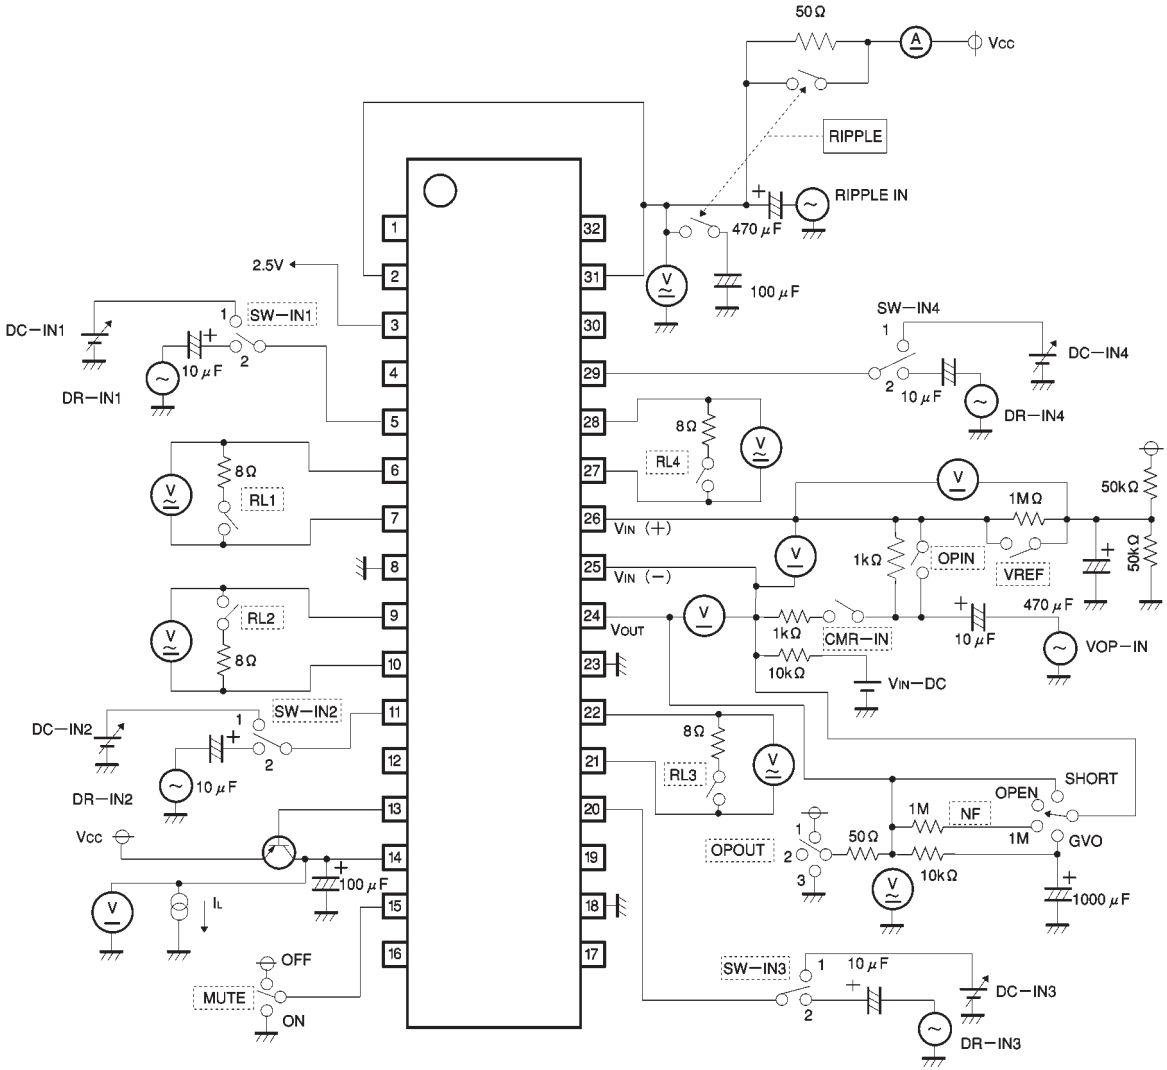

Fig.1

●Circuit operation

(1) Driver

Inputs to the IC are the focus tracking error signal from the servo preamplifier and the control signal from the motor.

The input signals, which normally center on 2.5V, are V/I converted by the preamplifier, generating a current corresponding to the input voltage. This current is passed through a resistor and into the internal reference voltage component, the preamplifier output being a signal centering on the internal reference voltage. Two systems (positive phase and negative phase) are created during V/I conversion, generating BTL output via the driver buffer.

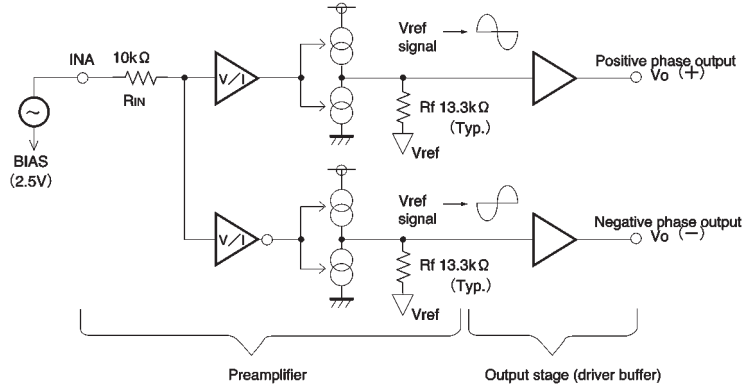

Fig. 2

(2) Regulator

This is a typical series regulator that generates a reference voltage internally. A PNP low saturation transistor must be connected.

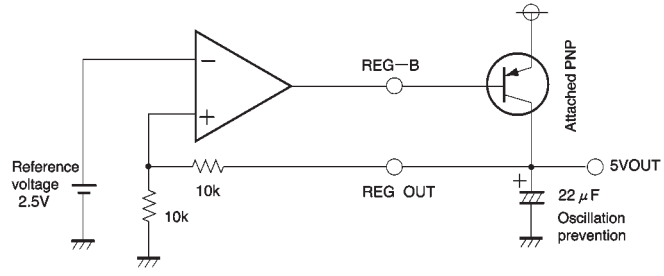

Fig. 3

(3) Amplifier

General 4558 type.

BA6897FP

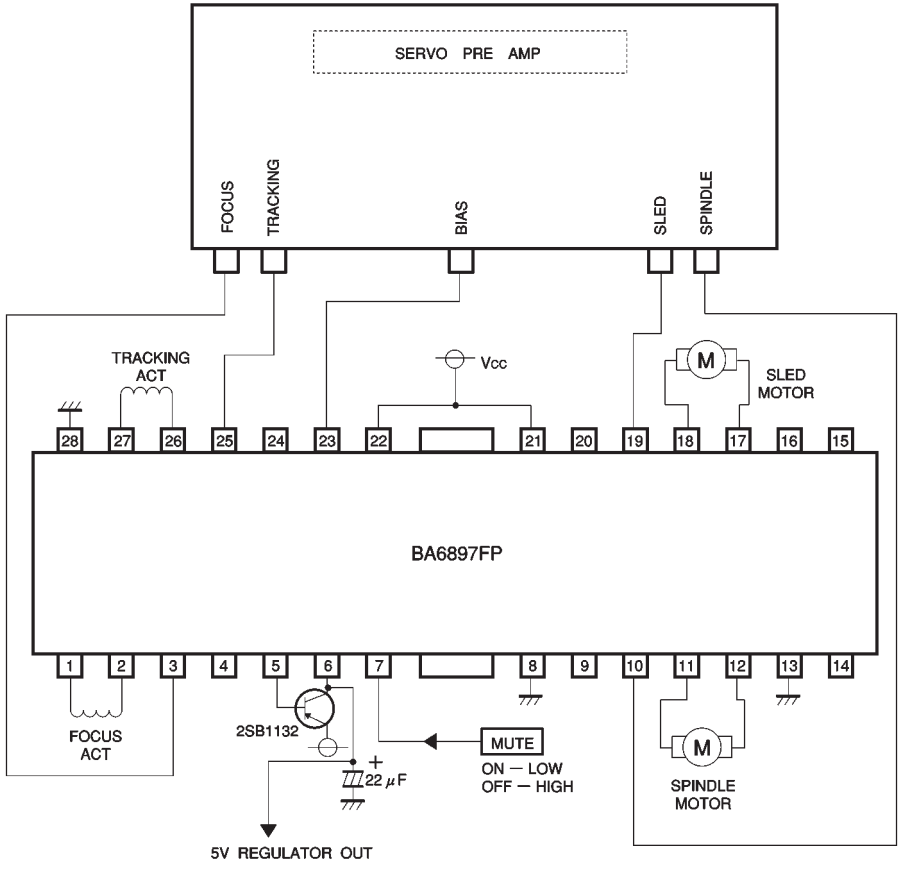

Fig.5

●Operation notes

(1) The BA6897S and BA6897FP have an internal thermal shutdown circuit. Output current is muted when the chip temperature exceeds 175°C (typically).

(2) If the mute pin voltage is opened or lowered below 0.5V, the output current will be muted. The mute pin should be pulled up above 2.0V during normal use.

(3) The bias pin is muted when lowered below 1.4V (typically). Make sure it stays above 1.6V during normal use.

(4) Muting occurs during thermal shutdown, mute-on operations or a drop in the bias pin voltage or supply voltage. In each case, only the drivers are muted. During muting, the output pins remain at the internal bias voltage, roughly $(V_{CC}-V_F)/2$.

(5) Be sure to connect the IC to a 0.1µF bypass capacitor to the power supply, at the base of the IC.

(6) The radiating fin is connected to the packages internal GND, but should also be connected to an external ground.

(7) The capacitor between regulator output (pin 6) and GND also serves to prevent oscillation of the IC, so select one with good temperature characteristics.
