

DS1631/DS3631, DS1632/DS3632, DS1633/DS3633, DS1634/DS3634 CMOS Dual Peripheral Drivers

General Description

The DS1631 series of dual peripheral drivers was designed to be a universal set of interface components for CMOS circuits.

Each circuit has CMOS-compatible inputs with thresholds that track as a function of V_{CC} (approximately $\frac{1}{2} V_{CC}$). The inputs are PNPs providing the high impedance necessary for interfacing with CMOS.

Outputs have high voltage capability, minimum breakdown voltage is 56V at 250 μ A.

The outputs are Darlington connected transistors. This allows high current operation (300mA max.) at low internal V_{CC} current levels since base drive for the output transistor is obtained from the load in proportion to the required loading conditions. This is essential in order to minimize loading on the CMOS logic supply.

Typical $V_{CC} = 5.0V$ power is 28mW with both outputs ON. V_{CC} operating range is 4.5V to 15V.

The circuit also features output transistor protection if the V_{CC} supply is lost by forcing the output into the high

impedance OFF state with the same breakdown levels as when V_{CC} was implied.

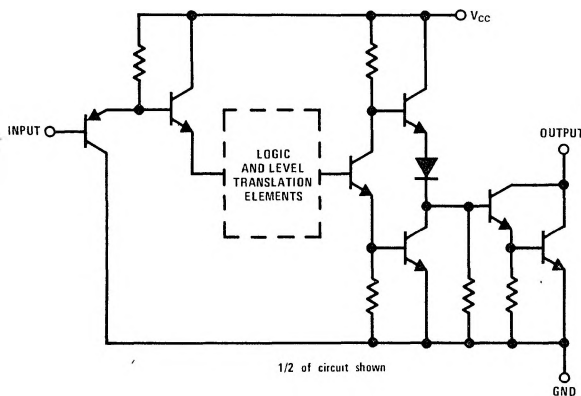

Pin-outs are the same as the respective logic functions found in the following popular series of circuits: DS75451, DS75461, DS3611. This feature allows direct conversion of present systems to the DM74C CMOS family and DS1631 series circuits with great power savings.

The DS1631 series is also TTL/DTL compatible at $V_{CC} = 5.0V$.

Features

- CMOS compatible inputs
- TTL/DTL compatible inputs
- High impedance inputs
- High output voltage breakdown PNP's
56V min.
- High output current capability 300mA max.
- Same pin-outs and logic functions as DS75451, DS75461, and DS3611 series circuits
- Low V_{CC} power dissipation (28mW both outputs "ON" at 5.0V)

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: Unless otherwise specified min/max limits apply across the $-55^\circ C$ to $+125^\circ C$ temperature range for the DS1631, DS1632, DS1633 and DS1634 and across the $0^\circ C$ to $+70^\circ C$ range for the DS3631, DS3632, DS3633 and DS3634. All typical values are for $T_A = 25^\circ C$.

Note 3: All currents into device pins shown as positive, out of device pins as negative, all voltages referenced to ground unless otherwise noted. All values shown as max or min on absolute value basis.
