

## DS7833/DS8833/DS7835/DS8835 Quad TRI-STATE® Bus Transceivers

### General Description

This family of TRI-STATE bus transceivers offers extreme versatility in bus organized data transmission systems. The data bus may be unterminated, or terminated DC or AC, at one or both ends. Drivers in the third (high impedance) state load the data bus with a negligible leakage current. The receiver input current is low allowing at least 100 driver/receiver pairs to utilize a single bus. The bus loading is unchanged when  $V_{CC} = 0V$ . The receiver incorporates hysteresis to provide greater noise immunity. All devices utilize a high current TRI-STATE output driver. The DS7833/DS8833 and DS7835/DS8835 employ TRI-STATE outputs on the receiver also.

The DS7833/DS8833 are non-inverting quad transceivers with a common inverter driver disable control and common inverter receiver disable control.

The DS7835/DS8835 are inverting quad transceivers with a common inverter driver disable control and a common inverter receiver disable control.

### Features

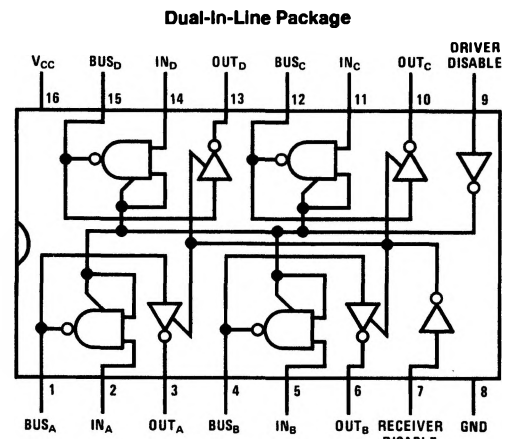

- Receiver hysteresis 400 mV typ
- Receiver noise immunity 1.4V typ
- Bus terminal current for normal  $V_{CC}$  or  $V_{CC} = 0V$  80  $\mu A$  max
- Receivers
  - Sink 16 mA at 0.4V max
  - Source 2.0 mA (Mil) at 2.4V min
  - 5.2 mA (Com) at 2.4V min
- Drivers
  - Sink 50 mA at 0.5V max
  - Source 32 mA at 0.4V max
  - 10.4 mA (Com) at 2.4V min
  - 5.2 mA (Mil) at 2.4V min
- Drivers have TRI-STATE outputs
- DS7833/DS8833, DS7835/DS8835 receivers have TRI-STATE outputs
- Capable of driving 100 $\Omega$  DC-terminated buses
- Compatible with Series 54/74

**Absolute Maximum Ratings** (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7.0V
Input Voltage	5.5V
Output Voltage	5.5V
Storage Temperature	-65°C to +150°C
Maximum Power Dissipation* at 25°C	
Cavity Package	1509 mW
Molded Package	1476 mW
Lead Temperature (Soldering, 4 sec.)	260°C

\*Derate cavity package 10.1 mW/°C above 25°C; derate molded package 11.8 mW/°C above 25°C.

**Note 1:** "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

**Note 2:** Unless otherwise specified min/max limits apply across the -55°C to +125°C temperature range for the DS7833, DS7835 and across the 0°C to +70°C range for the DS8833, DS8835. All typicals are given for V<sub>CC</sub> = 5.0V and T<sub>A</sub> = 25°C.

**Note 3:** All currents into device pins shown as positive, out of device pins as negative, all voltages referenced to ground unless otherwise noted. All values shown as max or min on absolute value basis.

**Note 4:** Only one output at a time should be shorted.
