

SEMICONDUCTOR TECHNICAL DATA

KIA6220H

BIPOLAR LINEAR INTEGRATED CIRCUIT

30W BTL DUAL AUDIO POWER AMPLIFIER.

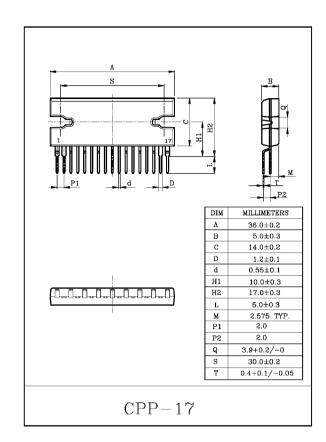

The thermal resistance θ j-c of KIA6220H package CPP-17(Compact Power Package 17pin), designed for low thermal resistance, has high efficiency of heat radiation.

The temperature rise of chip can be reduced, and the influence from the degradation of the features due to the temperature rise at the high output can also be reduced.

This stereo audio power IC, designed for car audio use, has two built-in channels to reduce the characteristic difference between L and R channels. It also contains output short detection circuit, output clip detection and various kind of protection.

FEATURES:

- · Low Thermal Resistance.
 - $: \theta \text{ j-c=1.5}^{\circ}\text{C/W} \text{ (Infinite heat sink)}$
- · High Power.
 - $:\!\!P_{OUT}(1)\!\!=\!\!30W(Typ.)\!/Channel$
 - (Vcc=14.4V, f=1kHz, THD=10%, R_L =2 Ω)
 - :Pour(2)=26W(Typ.)/Channel
 - (Vcc=13.2V, f=1kHz, THD=10%, R_L =2 Ω)
 - $:P_{OUT}(3)=19W(Typ.)/Channel$
 - (Vcc=13.2V, f=1kHz, THD=10%, R_L =4 Ω)
- · Low Distortion.
 - :THD=0.04%(Typ.) (V_{CC} =13.2V, f=1kHz, Pout=1W, R_L =4 Ω , G_V =50dB)
- · Low Noise.
 - $V_{NO}=0.30 \text{mV}_{rms}(\text{Typ.})$
 - (V_{CC}=13.2V, R_L=4 Ω , G_V=50dB, Rg=0 Ω , BW=20Hz \sim 20kHz)
- Built-in stand-by function. (With 4 pin set at low, power is turned OFF.) : $I_{SB}=1\mu A(Typ.)$
- · Built-in output short detection circuit. (9 pin : open collector)
- Built-in output clip detection circuit. (1) pin: open collector)
- · Built-in various protection circuits
 - Protection circuits: thermal shut down. over voltage, out $\rightarrow V_{CC}$ short, OUT \rightarrow GND short and OUT-OUT short.
- Operating supply voltage. : $V_{CC}=9\sim18V$

MAXIMUM RATINGS (Ta=25℃)

CHARACTERISTIC	SYMBOL	RATING	UNIT
Peak Supply Voltage (0.2sec)	V _{CC} surge	50	V
DC Supply Voltage	Vcc DC	25	V
Operating supply Voltage	V _{CC} opr	18	V
Output Current (Peak)	I _O (peak)	9	A
Power Dissipation	P _D	50	W
Operating Temperature	T_{opr}	-30 ∼ 85	J
Storage Temperature	$T_{ m stg}$	-55 ~ 150	J

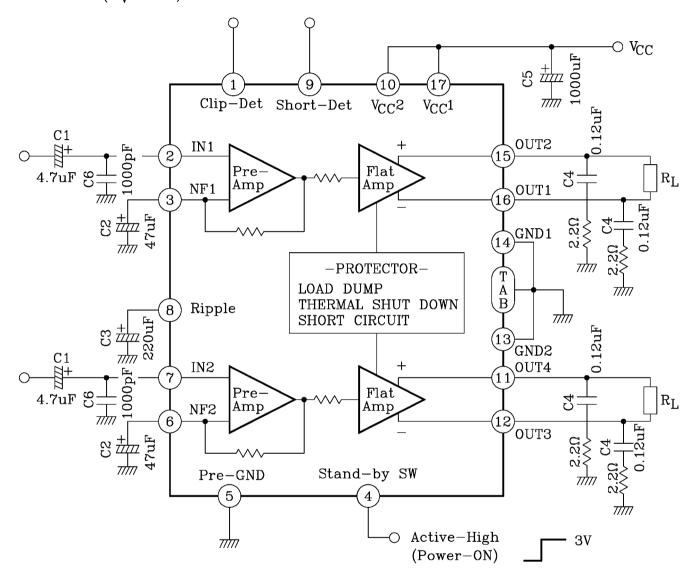

ELECTRICAL CHARACTERISTICS

(Unless otherwise specified, V_{CC} =13.2V, R_L =4 Ω , f=1kHz, Ta=25 $^{\circ}$ C)

CHARACTERISTIC	SYMBOL	TEST CIRCUIT	TEST CONDITION	MIN.	TYP.	MAX.	UNIT

BLOCK DIAGRAM AND TEST CIRCUIT

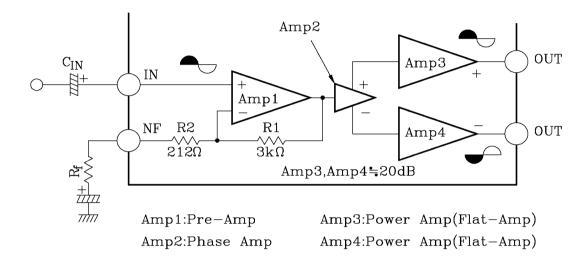

KIA6220H ($G_V = 50dB$)

CAUTIONS AND APPLICATION METHOD

(Description is made only on the single channel.)

1. Voltage Gain Adjustment

This IC has the amplifier construction as shown in Fig.1. The Pre-Amp(Amp 1) is provided to the primary stage, and the input voltage is amplified by the Flat Amps, Amp 3 and 4 of each channel through the phase Amp (Amp 2).

Since the input offset is prevented by Pre-Amp when Vcc is set to ON, this circuit can remarkable reduce the pop noise.

The total closed loop gain G_V of this IC can be obtained by expression below when the closed loop voltage gain of Amp 1 is G_V1 .

$$G_V 1 \text{=-} 20 Log \ \frac{R1 \ \text{+} \ (R_f \ \text{+} \ R2)}{R_f \ \text{+} \ R2} \ \ (\text{dB}) \ \ \cdots \cdots \cdots (1)$$

The closed loop voltage gain of POWER Amp, Amp3 and Amp 4 is fixed at $G_V3 = G_V4 = 20 dB$. Therefore, the total closed circuit voltage gain G_V is obtained through BTL connection by the expression below.

$$G_V = G_V 1 + G_V 3 + 6(dB)$$
(2)

For example, when Rf= 0Ω , G_V is obtained by the expression (1) and (2) as shown below.

$$G_V = 24 + 20 + 6 = 50$$
 (dB)

The voltage gain is reduced when Rf is increased. (Fig. 2)

With the voltage gain reduced, since (1) the oscillation stability is reduced, and (2) the pop noise changes when Vcc is set to ON, refer to the items 3 and 4.

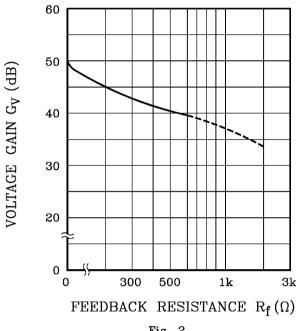

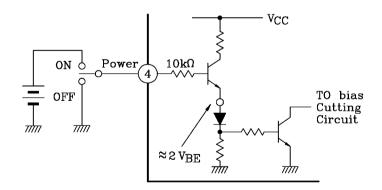

Fig. 2

2. Stand-by SW Function

By means of controlling 4 pin (Stand-by terminal) to High and Low, the power supply can be set to ON and OFF.

The threshold voltage of **4** pin is set at about 3V(Typ.), and the power supply current is about 1µA(Typ.) at the stand-by state.

(Fig.3) With (4) Pin set to High, Power is turned ON.

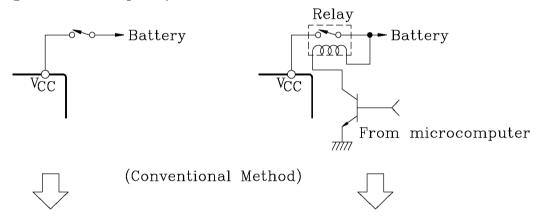

pin control voltage : V(SB)

Stand-By	Power	V(SB) (V)
ON	OFF	0 - 2
OFF	ON	3 - Vcc

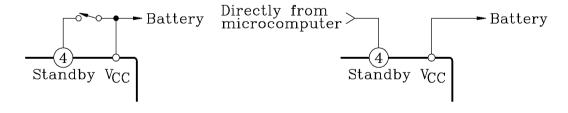

Advantage of Stand-by SW

- (1) Since Vcc can directly be controlled to ON/OFF by the microcomputer, the switching relay can be omitted.
- (2) Since the control current is microscopic, the switching relay of small current capacity is satisfactory of switching.

Large current capacity switch

Small current capacity switch

(Standby Switch Method)

3. Preventive Measure Against Oscillation

For preventing the oscillation, it is advisable to use C4, the condenser of polyester film having small characteristic fluctuation of the temperature and the frequency.

The resistance R to be series applied to C4 is effective for phase correction of high frequency, and improves the oscillation allowance.

Since the oscillation allowance is varied according to the causes described below, perform the temperature test to check the oscillation allowance.

- (1) Voltage gain to be used (G_V Setting)
- (2) Capacity value of condenser
- (3) Kind of condenser
- (4) Layout of printed board

In case of its use with the voltage gain Gv reduced or with the feedback amount increased, care must be taken because the phase-inversion is caused by the high frequency resulting in making the oscillation liably generated.

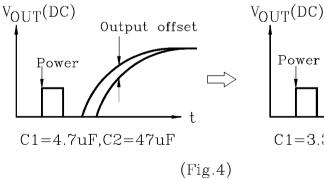

4. Input Offset Prevention Circuit At V_{CC}→ON

Having Pre-Amp (Amp 1) mounted on the primary stage, this IC contains the circuit for making the Amp 1 input voltage and the NF terminal voltage equipotent. Therefore, the offset voltage produced at the input stage is suppressed to prevent the pop noise at $V_{CC}\rightarrow ON$. The capacity values of the input and NF condenser (C_1 and C_2) shall be set according to the gain to be used(Fig 4).

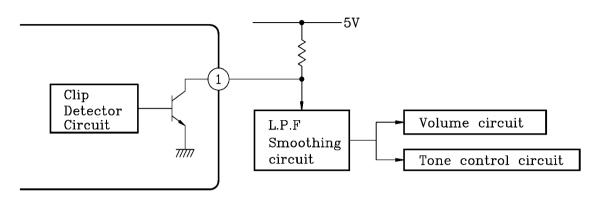

(Reference)

(A) At
$$G_V$$
=50dB, (Rf=0 Ω)
 C_1 =4.7 μ F, C_2 =47 μ F

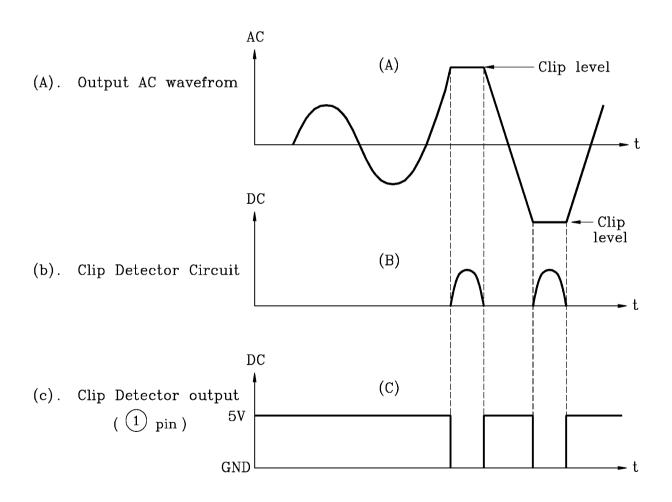

(B) At
$$G_V$$
=40dB (Rf=470 Ω) C_1 =3.3 μ F, C_2 =33 μ F

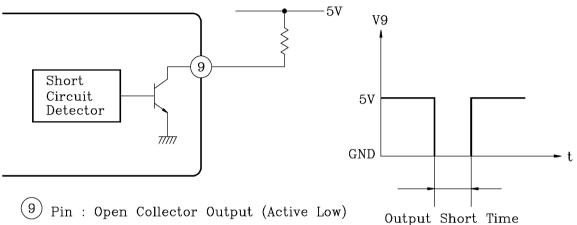

5. Output Cilp Detector: ① pin

1 Pin : Open Collector Output (Active Low)

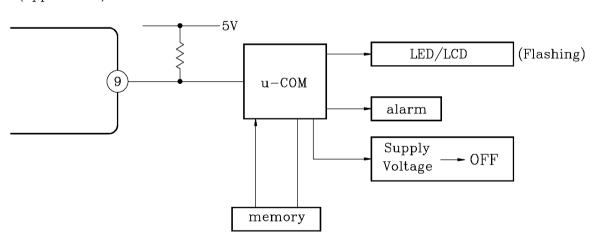

6. Short Circuit(OUT \rightarrow V_{CC}, OUT \rightarrow GND) Detector: 9Pin

Output Short Time

(Application)

In the unusual case that output terminal of Power Amp. is Out-GND short, it is possible to protect all the system of apparatus as well as Power IC.

7. External Part List and Description

SYMBOL ENDED	RECOMM-	OMM-	INFLU		
	ENDED OBJECT VALUE	SMALLER THAN RECOMMENDED VALUE	LARGER THAN RECOMMENDED VALUE	REMARKS	
C_1	4.7 μ F	DC Blocking	Related to pop noise at $V_{CC}\rightarrow ON$.		Related to gain. Refer to item 4.
			Related to pop noise at $V_{CC} \rightarrow ON$. Determination of low cut-off frequency $C_2 = \frac{1}{2\pi \ f_L \cdot R_f}$		
C_2	47 <i>μ</i> F	Feedback Condenser			
C ₃	220 μ F	Ripple Reduction	Time constant is small at $V_{CC} \rightarrow ON$ or OFF.	Time constant is large at $V_{CC} \rightarrow ON$ or OFF.	
C_4	0.12μ F	Oscillation Prevention	Made liable to oscillate.	Oscillation allowance improved.	Refer to item 3.
C ₅	1000μF	Ripple Filter	For filtering power supply hum and ripple. Large at using AC rectified power supply. Small at using DC power supply.		
C ₆	1000pF	Oscillation Prevention	Oscillation allowance improved Noise Reduction.		Refer to item 3.
