DESCRIPTION

The HC690/691 are high speed CMOS COUNTER/REGISTER fabricated in silicon gate C²MOS technology.

They have the same high speed performance of LSTTL combined with true CMOS low power consumption.

The internal circuit is composed of 3 stages including buffer output, which offers high noise immunity and stable output.

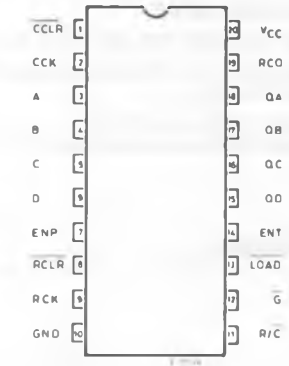

These devices incorporate a synchronous counter, four-bit D-type register, and quadruple two-line to one-line multiplexers with three-state outputs in a single 20-pin package. The counter can be programmed from the data inputs and have enable P and enable T inputs and a ripple-carry output for easy expansion. The register/counter select input, R/C, selects the counter when low or the register when high for the three-state outputs, Q_A , Q_B , Q_C , and Q_D .

Individual clock and clear inputs are provided for both the counter and the register. Both clock inputs are positive-edge triggered. The clear lines are active low and is synchronous.

All inputs are equipped with protection circuits against static discharge and transient excess voltage.
