DESCRIPTION

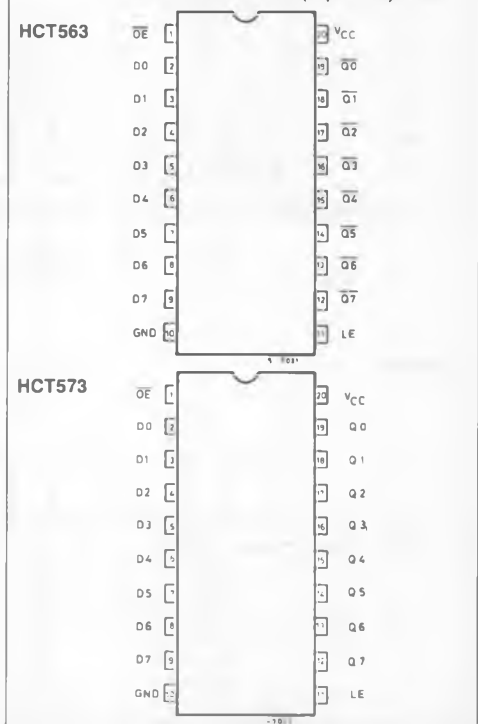

These devices are high speed C²MOS OCTAL LATCHES with 3-STATE OUTPUT fabricated with silicon gate C²MOS technology. These ICs achieve the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

These 8-bit D-type latches are controlled by a latch enable input (LE) and an output enable input (\overline{OE}). While the LE input is held high, the Q outputs will follow the data input precisely or inversely. The Q outputs will be latched precisely or inversely at the logic level of D input data the instant LE is taken low.

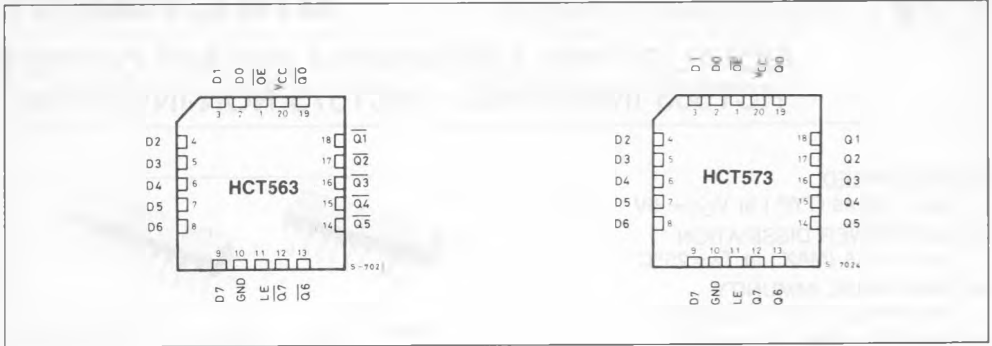

When the \overline{OE} input is low, the eight outputs will be in a normal logic state (high or low logic level) and when high the outputs will be in a high impedance state.

The application designer has a choice of a combination of inverting and non-inverting outputs, symmetrical and neighbouring input/output pin layout. All inputs are equipped with protection circuits against static discharge and transient excess voltage.

These integrated circuits are totally compatible, input and output characteristic, with standard 54/74 LSTTL logic families. M54HCT/74HCT devices are designed to directly interface HSC²MOS system with TTL and NMOS components. These components are also plug in replacements for LSTTL devices but with lower power consumption.

ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Value	Unit
V _{CC}	Supply Voltage	- 0.5 to 7	V
V _I	DC Input Voltage	- 0.5 to V _{CC} + 0.5	V
V _O	DC Output Voltage	- 0.5 to V _{CC} + 0.5	V
I _{IK}	DC Input Diode Current	± 20	mA
I _{OK}	DC Output Diode Current	± 20	mA
I _O	DC Output Source Sink Current Per Output Pin	± 35	mA
I _{CC} or I _{GND}	DC V _{CC} or Ground Current	± 70	mA
P _D	Power Dissipation	500 (*)	mW
T _{stg}	Storage Temperature	- 65 to 150	°C

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these condition is not implied.

(*) 500 mW: ≡ 65°C derate to 300 mW by 10 mW/°C: 65°C to 85°C.

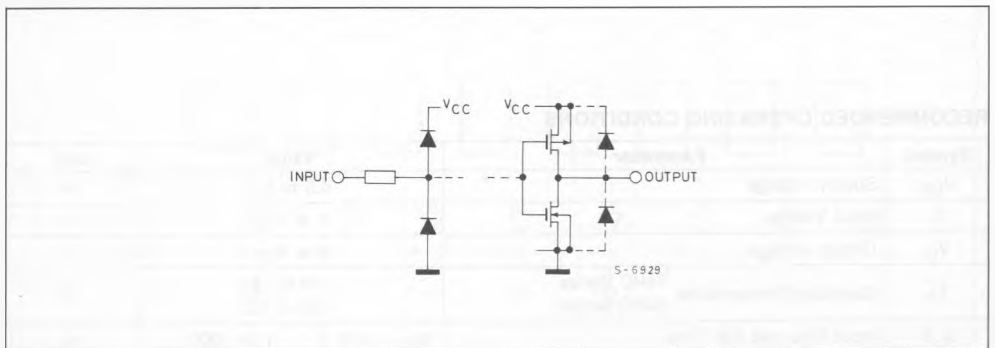

RECOMMENDED OPERATING CONDITIONS
