

World's Smallest 3¹/₂- and 4¹/₂- Digit ADCs with LCD Display Driver

Compared with earlier panel-meter ADC solutions, Maxim's new sigma-delta-based panel-meter ICs provide higher integration and performance in a tiny 7mm × 7mm TQFP. Eliminating the need for an external precision integrating capacitor, auto-zeroing capacitor, and external clock source, they provide >100dB of 50Hz/60Hz noise rejection using a single 2.7V to 5.25V supply. An internal 2.048V, 20ppm/°C reference further reduces the external component count. Optional SPI™/QSPI™/MICROWIRE™ allows the result to be processed by a μC before outputting to the display.

- **Eliminates Integrating/ Auto-Zero Capacitors**
- **2.7V to 5.25V Single-Supply Operation**
- **Up to 10x Footprint Reduction**

- **SPI/QSPI/MICROWIRE Interface (MAX1491/1494) Allows Measurements to Be Processed Using a μC**

Part	Display	Digits	Resolution (Count)	Interface	Pin-Package
MAX1491*	LCD	3 ¹ / ₂	±1999	Serial	28-TSSOP
MAX1492*	LCD	3 ¹ / ₂	±1999	Stand-Alone	28-TSSOP
MAX1493*	LCD	4 ¹ / ₂	±19999	Serial	32-TQFP
MAX1494*	LCD	4 ¹ / ₂	±19999	Stand-Alone	32-TQFP
